## DETAILED ACTION

### *Allowable Subject Matter*

1. The following is a statement of reasons for the indication of allowable subject matter:

Claim 1 is allowable over the art of record because the prior art does not teach wherein the electrical currents flowing through the one of the plurality of antenna elements and the neighboring one of the plurality of antenna elements have a magnitude such that a first antenna mode excited by one of the plurality of antenna ports is substantially electrically isolated from a second antenna mode excited by another one of the plurality of antenna ports at a desired signal frequency range without coupling a decoupling network to the plurality of antenna ports, and wherein the antenna structure generates diverse antenna patterns and in combination with the remaining claimed limitations.

2. Claim 16 is allowable over the art of record because the prior art does not teach one or more elements electrically coupling the plurality of antenna elements, wherein electrical currents on one of the plurality of antenna elements flow to a neighboring one of the plurality of the antenna elements, wherein the electrical currents have a magnitude such that a first antenna mode excited by one of the plurality of antenna ports is substantially electrically isolated from a second antenna mode excited by another one of the plurality of antenna ports at a desired signal frequency range without coupling a decoupling network to the plurality of antenna ports and in combination with the remaining claimed limitations.

3. Claim 19 is allowable over the art of record because the prior art does not teach one or more elements coupling the plurality of antenna elements, wherein electrical currents on one of

the plurality of antenna elements flow to a neighboring one of the plurality of the antenna elements, wherein the electrical currents have a magnitude such that a first antenna mode excited by one of the plurality of antenna ports is substantially decoupled from a second antenna mode excited by another one of the plurality of antenna ports at a desired signal frequency range without use of a decoupling network and in combination with the remaining claimed limitations.
