

Amendments to the Claims

1. (Currently Amended) A recycling receptacle comprises:
 - a container portion defining a chamber and for storing material to be recycled in the chamber; and
 - a communication portion for communicating what material should be recycled, the communication portion comprising:
 - an opening in fluid communication with the container portion chamber;
 - and
 - [[a]] multiple visible cavity cells that holds hold examples of materials that should be recycled, wherein the cells have an opening to receive the materials, wherein the communication portion further comprises a base and a lid, wherein the base includes the cells, the base is hingedly attached to the lid, and the cell openings are accessed by raising the lid.
2. (Original) The receptacle of claim 1, wherein the communication portion is transparent.
3. (Canceled)
4. (Previously presented) The receptacle of claim 1, wherein the container portion is divided into a plurality of separate chambers, and wherein the communication portion comprises a plurality of openings, each opening in fluid communication with one of the separate chambers.

5-6. (Canceled)

7. (Currently amended) The receptacle of claim ~~[[6]]~~ 1, wherein the cells are separated by dividers.

8. (Currently amended) The receptacle of claim ~~[5]]~~ 1, wherein the base is opaque.

9. (Original) The receptacle of claim 8, wherein the lid is transparent.

10. (Currently amended) The receptacle of claim ~~[5]]~~ 1,, wherein the lid and the base are joined with a lock.

11. (Previously presented) The receptacle of claim 1, wherein the opening comprises a removably sealable obstacle.

12. (Original) The receptacle of claim 1, wherein the opening comprises flaps that are removably sealable.

13. (Original) The receptacle of claim 1, wherein the communication portion and container portion are engaged to one another.

14. (Original) The receptacle of claim 13 wherein the communication portion and container portion are engaged to one another via a flange.

15. (Previously presented) The receptacle of claim 14, wherein the communication portion comprises the flange, and the flange extends downward from the communication portion into the container portion to engage an interior surface of the container portion.

16. (Original) The receptacle of claim 1, wherein the communication portion also includes text labels to indicate the materials to be recycled.

17. (Original) The receptacle of claim 1, wherein the communication portion comprises holes therein to promote ventilation of the container portion chamber.

18. (Canceled)

19. (Previously presented) The receptacle of claim 1, wherein the visible cavity is divided into a plurality of visible cells, each of the cells being associated with the opening, wherein each of the cells holds an example of a different one of the materials.

20. (Currently amended) A receptacle communication portion comprising:
a communication portion for communicating what material should be disposed of,
the communication portion comprising:

an opening for fluid communication with a container portion chamber defining a chamber and for storing material to be disposed of in the chamber; and

a visible cavity that holds examples of materials that should be disposed of, the visible cavity comprising multiple visible cells that hold examples of material to be disposed of, wherein the communication portion further comprises a base and a lid, wherein the base includes the cells, the base is hingedly attached to the lid, and the cells are accessed by raising the lid.

21. (New) The receptacle of claim 1, wherein the opening is an open passage.

22. (New) The receptacle of claim 1, wherein the base is transparent.
